

Noorun Nobi

Aspiring Cybersecurity & IT Support Professional · CompTIA Security+ Certified

London · nnobi.inbox@hotmail.com · linkedin.com/in/noorun-nobi-6b76a3217 · github.com/CourageToChange

Portfolio: noor.noorfamily.uk · Eligible to work in the UK — no sponsorship required

PROFILE

Security professional with a Computer Science background and CompTIA Security+ certification, seeking a **cybersecurity or IT apprenticeship** or an **entry-level IT support role**. I currently work in front-line security at the British Museum, where I coordinate technical and facilities issues daily, and I'm building hands-on skills in a self-hosted home security lab that I designed, hardened and operate myself. Reliable, detail-focused and calm under pressure — looking for a team where I can apply my security mindset and grow into a cyber or IT career.

KEY SKILLS

Cybersecurity: Security+ fundamentals (threats & vulnerabilities, access control, network security, security operations) · incident identification, response & reporting · system hardening · intrusion prevention (fail2ban) · CCTV & access-control systems

IT & infrastructure: Linux administration · virtualisation & containers (Proxmox / LXC / Docker) · networking (TCP/IP, DNS, DHCP, subnetting) · TLS / reverse proxy · backup & disaster recovery (3-2-1) · Windows 10/11 · PC building & hardware repair · service-desk / ticketing workflows

Programming & data: Python · Java · C · JavaScript / TypeScript · Bash scripting & automation · Git / GitHub · AI-assisted development (spec-driven delegation, code review, verification) · data cleaning & processing (Python) · Microsoft 365 / Excel

Professional: attention to detail · calm under pressure · clear written & verbal communication · reliability and discipline (sustained night-shift work) · customer service & stakeholder handling

TECHNICAL PROJECTS (personal, self-directed)

Self-Hosted Home Server & Security Lab

- Built and administer a 6-service self-hosted Linux server (Proxmox / LXC) as a personal security lab — this is also where my portfolio website is hosted.
- Hardened the environment: key-only SSH, default-deny firewall, fail2ban intrusion prevention, TOTP two-factor authentication, network segmentation, least-privilege access.
- Deployed a reverse proxy with automated TLS (Let's Encrypt) and a Cloudflare WAF — managed rules, bot protection and rate-limiting on login endpoints.
- Implemented a 3-2-1 backup and disaster-recovery strategy with scripted automation and deletion-protection.
- Run network-wide DNS filtering to block ad, tracker and malware domains across all devices.

Retro Snake Arena — multiplayer web game with security review (AI-assisted project)

- Directed and managed an AI-assisted build of a real-time multiplayer browser game (Node.js, Express, WebSockets, SQLite) with server-authoritative logic to prevent cheating.
- Implemented secure authentication (bcrypt-hashed passwords, hashed session tokens, HttpOnly cookies), parameterised SQL, input validation, XSS escaping and rate-limiting.
- Performed a security review of the codebase — found an unauthenticated endpoint, a WebSocket denial-of-service risk and a CDN-evading rate-limit — and wrote a prioritised remediation plan.

Patchwork — full-stack PWA delivered by directing an AI engineering team

- Shipped a production infinite-canvas mood-board app (React, TypeScript, Node.js/Express, SQLite) by orchestrating multiple AI coding agents: I wrote the specifications and acceptance criteria, assigned parallel work lanes, required cross-review between agents, and personally reviewed and live-tested every change.
- Kept privacy, security and deployment decisions human-owned: hardened container deployment, identity-based access, and a sanitised public source release guarded by an automated leak scanner (github.com/CourageToChange/patchwork).

Other projects — more on GitHub: github.com/CourageToChange

- **Bloom** — accessibility-first daily-puzzle web app built for a real user with ADHD: 17 puzzle types, evidence-based calm design, 49 automated tests enforcing touch-target and sensory-setting requirements, self-hosted with invite-only access.
- **South London Law Society website** — full-stack case-management site: case submission, real-time tracking, solicitor and admin workflows (React, Node.js/Express, MySQL, AES-encrypted data).
- **StudyTrack** — native Android app that turns plain-text weekly study plans into daily checklists with widgets and reminders.
- **Private photo & file migration** — moved thousands of photos to a self-hosted library via CLI tooling with de-duplication, metadata preservation and least-privilege access.

EXPERIENCE

Security Officer — The British Museum, London

August 2024 — Present

- Provide front-line physical security at a major, high-footfall cultural institution.
- Primary point of contact with the CBRE service desk — report and track facilities faults and escalate issues to resolution.
- Coordinate contractor access into restricted and high-security areas.
- Monitor CCTV and access-control systems and respond to incidents following established protocols; maintain accurate shift logs and incident records.

Door Supervisor — Regency Security Services UK Ltd, London

November 2022 — August 2024

- Monitored sites, enforced procedures and produced accurate incident records under pressure; made sound, defensible decisions and communicated calmly with the public.

Sales Assistant — Charles Tyrwhitt, London

January 2024 — March 2024

- Delivered professional customer service in a premium retail environment; handled customer queries, sales and records accurately.

Barista — Starbucks, London

October 2021 — December 2023

- Worked accurately at pace in a high-volume environment; supported colleagues.

CERTIFICATIONS & EDUCATION

- **CompTIA Security+** — certified October 2025 (valid until October 2028)
- **SIA Door Supervisor Licence · CCTV Licence · First Aid Certificate**
- **BSc Computer Science (2 of 3 years completed)** — London South Bank University
